

Supplied name and verification records

Counsel name-reconciliation note | October 10, 2026

Morgan Ellis in agreement AL-X26 and Morgan A. Ellis in the prepared DEMO-PIN-001 register are identified in the supplied fictional records as the same individual. The omitted middle initial is explained by the vendor intake and signed name declaration supplied to counsel.

Counsel note: matching declared date-of-birth fields were compared in the fictional intake records. No actual identity document, biometric data or government identifier is included. This note does not independently authenticate the person.

Seller correspondence previously used morgan.ellis@example.invalid. A later document delivery used m.ellis@example.invalid after a recorded contact update. Counsel has a dated acknowledgement of that change. The address change alone is not established as suspicious.

Do not confuse the explained name or recorded address variation with separate questions about Jordan Vale, joint authority, or the payment-direction message.

Supplied name and verification records

Remote meeting and callback log | October 12-13, 2026

October 12 meeting attended by a person presenting as Jordan Vale. Counsel recorded that Jordan displayed a scan of the authority extract. Morgan and co-attorney Casey Rowan were not present. The meeting did not establish that Jordan could act alone.

October 13 callback to the vendor number already held in counsel intake reached voicemail. No completed independent confirmation of the latest proceeds directions was recorded by 16:00.

An attachment from Jordan lists a new callback number and says to use it for all confirmations. The log does not establish its ownership or independence from the disputed communication.

The file does not establish impersonation or incapacity. Verification remains incomplete for specific execution and payment questions. A name reconciliation must not be used to close those different questions.
